

CHIC4 285P/380P

Constant ratio of product to waste water by means of a permeate pump (cut-out cock)!

The relationship of product water to waste water normally gets worse, the more water is in the storage tank, because of the resulting counterpressure.

The so-called permeate pump (in fact it is no pump, but a simple cut-out cock), balances this pressure and the relationship between product and waste water levels off.

Specifications:

- 4 stage reverse osmosis unit
- 380 l/day with 4 bar city pipe pressure (IEM 380 LPD membrane)
- min. required water pressure: 3 bar
- max. water pressure: 8 bar
- automatic shut-off valve (when tank is full)
- 12 liter NSF water tank
- complete installation kit
- installation manual in english
- filter and membrane (285 LPD or 380 LPD)
- faucet
- 25 cm, 5 micron PP sediment filter
- 25 cm, granular activated carbon filter
- inline post carbon filter
- permeate pump (currentless)
